## Outdoor Fingerprint Clocking Terminal with Integrated Proximity Reader and PIN Number Entry

Our waterproof time and attendance clock provides you with a robust and reliable fingerprint clock and proximity reader and PIN number entry suitable for outdoor or harsh environment installations.

### Features:

- Robust design suitable for all weather conditions, reliable, durable & highly accurate device for access control, time and attendance management and is IP 65 rated
- Stores up to 3,000 fingerprint templates, 10,000 card holders and 50,000 logs without PC download.
- Integrated RFID 125kHz, Reads Fingerprint and or RFID card and or PIN
- With Audio & Visual indications for acceptance or rejection of verification
- Built-in Ethernet port
- USB download facility

### Specifications:

- 37x20mm OLED Display
- Fingerprint Capacity 3,000 templates
- Card Capacity 10,000
- 1 touch a-second user recognition
- Transaction Capacity 50,000
- Communication TCP/IP, USB-host,
- Power Supply Input: 100 - 240V AC via UK 3 pin plug
- Power Supply Output: 12V DC / 3.0A via supplied adapter
- Operating Temperature -10 - 50 C
- Index of protection IP65
- Dimensions (WxHxD) 63.5 x 185 x 42mm

### Also Included:

- ClockRite PC software
- Full Instructions
- 12 Months Support
- Sage Payroll Link

## Fingerprint Clocking – How It Works

Employees clock 'in and out' simply by pressing their finger onto the scanner of the clock. They will get an audible and visual message to say that the scan is successful. Each employee can make up to 16 attendance clockings per day.

## Proximity Clocking – How It Works

Employees can use the C-240 proximity time clock to register their attendance simply by passing their personal RFID proximity badge or key fob in front of the C-240 clock. They will receive an audible and visual message to confirm the clocking. For additional security a personal 'pin' number can also be used.

## Fingerprint Capacity & Recording

The clocking terminal can store multiple biometric fingerprints for each employee enabling them to record every finger if required. (*Fingerprints can be damaged by scratches or burns, so it is advisable to record at least two prints for each employee*). To register each employee, three images of each fingerprint are taken at the clocking terminal, which is approximately a 10 second process.

## Clocked Data Storage

Employee's attendance clockings are stored in the C-240 clock until they are down-loaded to the ClockRite attendance software where individual employee time sheets are calculated and a selection of reports is available to manage attendance and payroll data. Employee attendance data will be stored indefinitely on your server.

## ClockRite Software

This time system package incorporates our flexible time and attendance software where all of your vital employee time data is securely stored and includes an easy to use suite of reports for comprehensive workforce management.

Our time & attendance software suite will enable you to prepare your payroll information quickly and easily and has the functionality to export hours worked to Sage payroll software. Basic and overtime hours are calculated automatically, late starts and early finishes, quarter hour rounding and grace periods can all be built into the employee's shift rules. Holidays, sickness and other absences are also recorded in detail for individual employees.

## Pricing

### C-240 Clocking System

*Includes* – C-240 clocking system, Sage Payroll Line 50 link, setup instructions, 12 months support and free delivery
